

Second Extension of FS Engineer (TUV Rheinland) Certificate

TÜV Rheinland Functional Safety Engineer Training Program

Honeywell Academy offers a course SMS-4503-CT: Safety Mgmt. Systems: Certification – TÜV Functional Safety Program IEC 61508 SIL to Honeywell employees and customers. This Training Program and associated Certification examination delivers a Functional Safety competency for engineers according to the relevant standards IEC 61508 and IEC 61511.

Initially the FS Engineer (TÜV Rheinland) Certificate validity was 5 years and the holders could extend it for further 5 years by contacting TUV directly.

For those FS Engineers whose first extension expires in 2020 or later and wish to extend its the validity for the second time, TÜV Rheinland has proposed following Options:

1. Retake of training course SMS-4503-CT and exam. The training course is thoroughly reviewed considering latest updates of various Safety standard. This is a recommended solution.
2. Retake the exam only. The exam is allowed only once and if the individual fails to pass, they need to attend full course SMS-4503-CT and exam.

After passing the exam, TÜV Rheinland will email the FS Engineer Certificate with 10-year validity and the holders are listed at Certipedia (www.certipedia.com).

Honeywell Academy will be happy to help you for the Second extension of the FS Engineer Certificate whether you choose to retake the course or only exam.

Please contact your Honeywell Account Manager or write to following email address for the quotation, registration, and upcoming exam dates:
