UNIFORMANCE® ASSET SENTINEL
A Real-time Sentinel for Continuous Process Performance Monitoring and Equipment Health Surveillance
What is Uniformance Asset Sentinel?

Asset Sentinel is a critical element of the Uniformance Suite that delivers real-time asset-centric analytics, event detection and work-flow for engineering, maintenance and operations to easily identify and solve process and equipment problems.

This solution provides a sentinel to continuously monitor equipment and process health, enabling industrial facilities to predict and prevent asset failures and poor operational performance.

Uniformance Asset Sentinel is a unique solution in the process industry because it provides a unified platform to monitor both process and equipment performance by creating a “digital twin” to continuously compare actual performance vs. expected performance and is able to deliver actionable alerts while supporting a workflow to quickly investigate and address these alerts in order to minimize frequency and impact of deteriorating performance.

Challenges for Industrial Plants

Equipment failure and almost imperceptible reductions in process efficiency are constant threats to Overall Equipment Effectiveness (OEE). As a result, organizations are spending more on equipment maintenance and losing potential revenue. Factors such as availability of skilled workers and increasingly complex production processes are impacting the ability to predict and detect deteriorating asset health and process performance.

Importance of Digital Intelligence

Today, companies require “digital intelligence” to manage hundreds or even thousands of assets from a single site or across an enterprise to address crucial operating demands. Digital intelligence transforms process data into real-time knowledge regarding process performance, equipment health and energy consumption. Plant operators also need continuous surveillance and notifications to take the right proactive actions, which minimize degradation, poor performance and secondary damage to equipment to ensure lower costs, increased throughput and higher profits.
Make Problems Visible

In order to minimize losses or damage, businesses must be equipped with systems to make problems visible. Continuous surveillance of key operating and equipment conditions with Uniformance Asset Sentinel allows the earliest possible indication of performance degradation and the appropriate prioritization to address the situation.

Honeywell’s expertise in process control, optimization, simulation and process design spans more than three decades. We are uniquely qualified to obtain required data and process information, and perform calculations and analytics to provide continuous surveillance of plant and process assets. While designed to seamlessly integrate with Honeywell control systems and other advanced applications, Uniformance Asset Sentinel is control system and historian independent.

Best-in-Class Features

Plant Reference Model—Uniformance Asset Sentinel provides a multi-level equipment hierarchy to model your plant and equipment structure. This solution supports multiple views based on various plant requirements and disciplines. The equipment hierarchy abstracts Asset Sentinel users from the underlying tag structure of data, and allows navigation of data in familiar asset-based terminology versus cryptic tag nomenclature. Uniformance Asset Sentinel also exposes to other applications and users the data in the plant model structure. For example, instead of searching for a tag such as -03F2014.PV to trend heat exchanger flow, in Asset Sentinel, the user simply navigates in the plant model to the site or unit, chooses the equipment, and then selects the inlet flow attribute.

Data Access—Uniformance Asset Sentinel supports a variety of data interfaces required for a complete view of your asset health or performance. This includes real-time and historical data (via OPC-DA and OPC-HDA), event data (via OPC-A&E), relational data and file-based data. It also offers a flexible “plug-in” architecture to access information from a variety of sources, which could include lab sample data, work order data, oil analysis results, etc.

Powerful Calculation Engine—Asset Sentinel supports an easy to use, fourth generation scripting language to perform simple to complex statistical calculations and data manipulation. Programming experience is not required and the environment is designed for engineering users. Calculations can be run in either real-time (on data change) or on a scheduled basis. Deploying these calculations within Asset Sentinel provides a managed platform to continuously calculate and make visible key calculation results across the organization rather than using numerous uncontrolled, isolated and duplicate spreadsheet based calculations.

Event Detection & Notification—For situations requiring the earliest possible attention and follow-up, Uniformance Asset Sentinel’s event detection environment make it possible to identify user-defined rules and checks to trigger alerts and warnings. Event information can include recommended response to the condition and is a mechanism for knowledge capture. When events are triggered, they can generate e-mail notifications, initiate workflows, or even prompt maintenance work order requests to a maintenance management system.

Solutions Across Industries and Assets

Designed to meet the needs of Honeywell customers worldwide, Uniformance Asset Sentinel works across industries—on a varied set of monitoring applications—and across a broad set of asset types.

Depth & Breadth of Capabilities

Industry

- Oil & Gas
- Refining & Chemicals
- Mining
- Pipelines
- Power

Monitoring Applications

- Process
- Health
- Efficiency
- Safety
- Energy

Type of Equipment/Complexity

- Software
- Instrument
- Valve
- Pump
- Heat Exchanger
- Compressor
- Turbine
- Haul Truck
- Unit

Customer Value

- Increase Asset Utilization up to 10%
- Reduce Maintenance Costs up to 10%
- Increase Operating Efficiency up to 10%
- Increase Safety

- Reduce unplanned downtime by predicting failures and providing proactive response
- Minimize rate and efficiency losses
- Pro-active response to minimize equipment damage and emergencies
- Optimize maintenance based on real asset conditions
- Improve reliability and extend equipment life
- Monitor energy usage to achieve up to 10% reduction in costs
- Improve engineering effectiveness with continuous monitoring, remote collaboration, and ready access to required information
- Increase engineering efficiency with an integrated decision support environment

• Minimize risks by ensuring normal and stable operations
• Eliminate production stops for safety system verification
Designed to Enable Smart Operations

Honeywell’s Uniforce Suite is the backbone for real-time digital intelligence through unified data, analytics and visualization. Digital intelligence enables smart operations by tuning asset and process data into actionable information. This capability is the answer to improved business results.

The Uniforce Suite includes the following solutions:

- **Uniforce PHD**—Capture and store real-time process and event data
- **Uniforce Insight**—Visualize and explore information anytime, anywhere, to gain valuable insights
- **Uniforce Asset Sentinel**—Detect and predict risks and opportunities with asset-centric analytics
- **Uniforce KPI**—Connect process intelligence to business decision-making and actions

**Uniforce Asset Sentinel Applications**

Uniforce Asset Sentinel has various packaged modules to meet specific user requirements. It is offered as a basic package providing the plant reference or asset model, calculation and rules model. Additionally, application specific packages are available. These include:

- **Asset Sentinel for Process & Equipment Monitoring**
  Adds embedded content to the base package, including
- **Advanced Performance Library**
  First-principles models for pumps, compressors, gas turbines, steam turbines and heat exchangers to compare current performance against predicted performance and highlight deviations as the earliest notification of equipment health problems—detecting valve wear, fuel nozzle issues, sensor problems, and turbine erosion.
- **Standard Performance Library**
  Pre-defined set of performance equations and fault models that can be customized and enhanced for vital assets such as furnaces, blowers, motors, etc.

**Uniforce**

Our proven track record includes the evolution of the @asset MAX suite of software from 1999. Since then, we’ve delivered asset-monitoring solutions to many of the world’s leading industrial firms. With 1,500 experts in over 80 countries around the world, Honeywell understands your business and can speak your language. Our consultants provide onsite and remote support for Overall Process Effectiveness (OPE) and Overall Equipment Effectiveness (OEE). We deliver a unique set of advanced software applications for better safety, reliability, efficiency and sustainability.

Honeywell’s Advanced Solutions software and expertise help customers make sense of all the data in their plant, allowing them to extract the right information for faster and smarter decisions that can improve safety, reliability, efficiency and sustainability—resulting in improved process and business performance.

In addition, Honeywell UOP’s Connected Performance Services (CPS), powered by Uniforce Asset Sentinel, enable industrial facilities to utilize cloud- and subscription-based solutions to gain an unobstructed view of operations, and in doing so, address their most critical challenges. CPS is aimed at better asset utilization, unplanned downtime, energy efficiency, and gaps in expertise as plants become more sophisticated and experienced engineers retire.

Uniforce enables digital device diagnostic information to be delivered visually with predictive insights; optimization. In-depth, multi-variant analysis can be performed proactively—to improve process reliability and asset optimization. In-depth, multi-variant analysis can be performed proactively—to improve process reliability and asset optimization. In-depth, multi-variant analysis can be performed proactively—to improve process reliability and asset optimization.

Why Honeywell?

Don’t compromise on your operational and business performance—choose an automation supplier committed 100% to your success. At Honeywell Process Solutions, we have decades of experience providing asset management technology to the process industries.

At Honeywell Process Solutions, we have decades of experience providing asset management technology to the process industries.
